

Assignment Name:

Understanding the Problem:

1. How did you approach understanding the challenge?

Read

2. Were there any parts of the problem that you found confusing at first? If so, how did you resolve the confusion?

None

Planning the Solution:

1. Did you create a plan or break the problem into smaller steps before coding?

Plan

2. How did you decide on which tools, algorithms, and data structures to use?

At first I decided to use lists and hashmaps, however hashmaps couldn't store more than one value properly so I decided to switch to turning the items into objects.

Implementation:

1. Did you write the code in smaller pieces or attempt the entire solution at once?

I attempted it all at once.

2. How did you test your solution to ensure that it was working correctly?

I tested each feature after implementing them.

Overcoming Challenges:

1. What part of the problem was the most difficult for you?

The part that was the most challenging was deciding how to organize the data for the items. I tried using arrays and hashmaps but realized it was way too convoluted. It was only after thinking for a while that I realized I could use objects instead.

2. How did you handle moments where you felt stuck or unsure what to do next?

I started by rethinking the plan from the start. I realized that my data structure was the problem so I asked ChatGPT for different methods to resolve the problem.

Learning:

1. Was there anything that you learned that you think will help you with future challenges?

Using objects to store data will prove useful in the future.
