Assignment Name:

Understanding the Problem:

1. How did you approach understanding the challenge?
   I had to create an object that holds coins with methods that allow the user to input coins, take coins, and see the value inside the object.

2. Were there any parts of the problem that you found confusing at first? If so, how did you resolve the confusion?
   None

Planning the Solution:

1. Did you create a plan or break the problem into smaller steps before coding?
   I broke the problem into the parts of the object, I started with implementing the object with a constructor as well as its fields, then I worked on the methods to take/insert coins. After I finished adding the feature to see the value of all the coins in the object, I had to implement a selection menu in the main method.

2. How did you decide on which tools, algorithms, and data structures to use?

   I used objects since it was the goal of the chapter.

Implementation:

1. Did you write the code in smaller pieces or attempt the entire solution at once?

   I wrote the code in smaller pieces one by one.

2. How did you test your solution to ensure that it was working correctly?

   I tested every feature, to check if calculating my values was correct I added the same coins I put in the program into an online coin calculator.

Overcoming Challenges:

1. What part of the problem was the most difficult for you?
   Nothing was that hard, but one thing I had to study was accessing fields in an object.

2. How did you handle moments where you felt stuck or unsure what to do next?
   Analyze the error, talk to peers, ask chatGPT.

Learning:

1. Was there anything that you learned that you think will help you with future challenges? Fetching through the fields in an object will be very useful.
