

Assignment name: Chapter 3, Mastery 1 (Exercise 5)

Error Log Entry:

1. What Error Message did you encounter?

None

2. What unexpected behavior did your program exhibit?

All the functions printed the center X, which was only supposed to occur for the function call in the middle.

3. What caused the issue?

I forgot to implement the additional argument that the center call adds, meaning that all of the calls print the center x instead of just the one function call.

4. Include a screenshot of the relevant lines of code

A screenshot of a code editor showing the implementation of a static void method named VerticalLine. The method takes two parameters: an integer 'Times' and a boolean 'Center'. It contains a for loop that iterates from 1 to Times. Inside the loop, there is an if statement that checks if the ceiling of Times divided by 2 is equal to the current loop index 'i'. If this condition is true, it prints 'X' and continues the loop. Otherwise, it prints a vertical bar '|'. The code is as follows:

```
12 static void VerticalLine(int Times, boolean Center) {  
13  
14     for (int i = 1; i <= Times; i++) {  
15  
16         if (Math.ceil((double) Times / 2) == i) {  
17             System.out.println("X");  
18             continue;  
19         }  
20  
21         System.out.println("|");  
22  
23     }  
24 }  
25  
26 }  
27
```

5. How did you fix the issue?

I added the extra conditional.

6. Provide the corrected code or solution using a screenshot

```
static void VerticalLine(int Times, boolean Center) {  
    for (int i = 1; i <= Times; i++) {  
        if (Math.ceil((double) Times / 2) == i && Center) {  
            System.out.println("      X      ");  
            continue;  
        }  
        System.out.println("    |      |    ");  
    }  
}
```
