

Assignment Name:

Understanding the Problem:

1. How did you approach understanding the challenge?

Read

2. Were there any parts of the problem that you found confusing at first? If so, how did you resolve the confusion?

None

Planning the Solution:

1. Did you create a plan or break the problem into smaller steps before coding?

First I planned to divide the drawing into four parts (top, bottom, left, right). Unfortunately, this wouldn't work since the left and right sides would have to be drawn on the same lines meaning they have to be made together.

2. How did you decide on which tools, algorithms, and data structures to use?

Lots of functions, currently what I want to practice.

Implementation:

1. Did you write the code in smaller pieces or attempt the entire solution at once?

I organized small chunks of code into functions.

2. How did you test your solution to ensure that it was working correctly?

I ran the code after completing it.

Overcoming Challenges:

1. What part of the problem was the most difficult for you?

Figuring out how to draw the sides of the shapes

2. How did you handle moments where you felt stuck or unsure what to do next?

I reflected on my approach.

Learning:

1. Was there anything that you learned that you think will help you with future challenges?

Ensure your approach would work before implementing it.
