Assignment Name:

Understanding the Problem:

1. How did you approach understanding the challenge?

Loop through a given number calculating the amount of characters and spaces using formulas to get the result of an isoceles triangle.

2. Were there any parts of the problem that you found confusing at first? If so, how did you resolve the confusion?

   None

Planning the Solution:

1. Did you create a plan or break the problem into smaller steps before coding?
   a. Get Userinput and verify its an input
   b. Loop the amount of times provided by the user
   c. Calculate the quantity of spaces and characters based on the loop instance
   d. Print the result

2. How did you decide on which tools, algorithms, and data structures to use?
   I chose to use methods since I'm reusing code multiple times and it makes the code cleaner.

Implementation:

1. Did you write the code in smaller pieces or attempt the entire solution at once?
   Entire solution at once

2. How did you test your solution to ensure that it was working correctly?
   I counted the number of rows and observed the shape of the triangle printed by the program.

Overcoming Challenges:

1. What part of the problem was the most difficult for you?
   Deriving the formulas from the pattern shown by isoceles triangles.

2. How did you handle moments where you felt stuck or unsure what to do next?
   None

Learning:

1. Was there anything that you learned that you think will help you with future challenges? Deriving formulas from patterns is crucial.
